Introduction

The SOS601 is a family of products based around a 60mm GRP pole. Two lengths of pole are available. A short 1000mm pole or a taller 1540mm version. They are usually fitted with a GRP foot (SOS400F) which is bolted down to concrete, wood or stone. Alternatively a straight pole with no foot can be supplied for new ground mounting and is held in place by fresh concrete.

Various components can be attached to the pole:

Lifebuoy of 22-30" Diameter held in place via two snatch grips

Throwing line holder- Held to the pole via two stainless steel bolts

SOS101 Fire extinguisher with SOS101 Back plate (fits over the pole)

Any combination of the above can be fitted to the pole to create the SOS601 safety station.

Key selling features of the SOS601

Complete safety solution for marinas with minimal labour required to install

Flexible design enables additional products can be added.

Compact dimensions to minimize footprint on wooden jetties

Low wind resistance due to small profile

High degree of corrosion resistance as it is almost entirely made from UV stabilised plastic.

Good value for money

**DESIGNED TO KEEP EVERYTHING
IN PERFECT WORKING ORDER.**
