PERFORMANCE IMPROVEMENTS INTRODUCED IN CLASS LEADING FIRE AND SAFETY STORAGE CABINETS

Jo Bird & Co Ltd, the UK's leading manufacturer of storage cabinets for firefighting and safety equipment, is introducing enhanced specifications for its high performance Firebird and ToughStore storage cabinets.

Its Firebird range of GRP moulded storage cabinets for fire equipment and accessories has been updated to include new, higher performance seals to improve their weather performance. In recent weather ingress tests the range has now been upgraded from Aquatext IPX5 to IP56.

The recently introduced Toughstore TS101 and TS201 ABS and acrylic combination storage cabinets have also now met the requirements of the rigorous weather ingress tests and have been awarded the IP56 rating.

Products in the Firebird range have recently had their Lloyds Register type approval renewed making them amongst the highest specification and performing products in their class. The ToughStore fire cabinet models TS101 and TS201 have also achieved Lloyds Register type approval for the first time.

Jo Bird's high performance Firebird range of storage cabinets is widely used throughout the world in offshore and marine applications in some of the most hostile environments experienced by exploration and production companies in the major natural gas and oil fields around the world.

The new TS101 and TS201 products in the ToughStore range use moulding materials which afford a combination of high performance and enhanced aesthetics to provide characteristics equally suitable for industrial and commercial applications. A combination of high visibility, impact resistance and security are particular features offered by products in the range.
